17	Attirelly	Task	New	P0	[QA-02] Production deploy + final sign-off.	sharique A	10 Aug 2026 07:32 PM
16	Attirelly	Task	New	P0	[QA-01] End-to-end smoke test across every module above, all 3 personas (customer/seller/admin), with particular attention to the security fixes (SEC-01/02/03) actually blocking what they're supposed to block.	Pritish K	10 Aug 2026 07:32 PM
15	Attirelly	Bug	New	P2	[Cu-01] Two small, real fixes only: (1) restore duplicate homepage-position protection — it was silently removed and replaced with a free-text number field that lets two sections collide on the live homepage; (2) decide whether the currently dead/comme...	Afsar .	10 Aug 2026 07:32 PM
14	Attirelly	Bug	New	P2	[I-01] Fix the two bugs above (small, bounded). Do NOT build a full campaign/commission/ROI engine this sprint — that needs named campaigns, budget, and an attribution design first (see Deferred section below).	aman .	10 Aug 2026 07:32 PM
13	Attirelly	Feature	New	P1	[Pr-01] Instead of more table/UI polish, build a catalog exception queue: surface products that are inactive/out-of-stock, missing images or required attributes, have invalid price/inventory, are out of sync with Algolia, are missing an occasion/catego...	Afsar .	10 Aug 2026 07:32 PM
12	Attirelly	Feature	New	P1	[C-01] (1) Delete the fake CSV-upload button entirely — don't spend sprint time building real customer import without a defined use case. (2) Build a narrowly-scoped customer detail page: click a customer, see their orders/payments/fulfillment/cancella...	aman .	10 Aug 2026 07:32 PM
11	Attirelly	Task	New	P1	[P-02] Confirm with a CA/GST advisor what's actually required, then find and close the gap letting 447 already-active stores sell without a GSTIN on file. Most likely explanation to check first: Shopify-synced sellers bypassing the listing-time check e...	sharique A	10 Aug 2026 07:32 PM
10	Attirelly	Task	New	P1	[P-01] Do NOT build COD this sprint. Instead, instrument checkout: where do customers actually abandon, and does it correlate with payment method or geography? Bring that real data (not national averages) to an explicit CEO-level COD decision.	sharique A	10 Aug 2026 07:32 PM
9	Attirelly	Task	New	P1	[O-02] Migrate to Numeric/integer-paise, including read/write compatibility across the app and a reconciliation check against existing data.	Prabhakar Kumar	10 Aug 2026 07:32 PM
8	Attirelly	Task	New	P1	[O-01] Full team QA pass hunting specifically for edge cases: concurrent seller/admin actions on the same order, partial cancellations, a return arriving mid-NDR, etc.	Prabhakar Kumar	10 Aug 2026 07:32 PM
7	Attirelly	Feature	New	P0	[A-01] Build the customer-facing surface using the data pipeline that already exists (no backend rework needed): an occasion index/landing page, named deep links (e.g. a Wedding page, a Festive page), and a homepage or nav entry point. Also fix the leg...	aman .	10 Aug 2026 07:32 PM
6	Attirelly	Feature	New	P0	[O-03] Build a settlement-ledger MVP (not automated bank payouts): per-seller period, gross sales / deductions / commission / net payable, downloadable CSV statement, and a manual "mark as paid" action with an audit trail. Blocked on SEC-04's seller-of...	Prabhakar Kumar	10 Aug 2026 07:32 PM
5	Attirelly	Task	New	P0	[SEC-04] Sharique + a CA/GST advisor must explicitly decide and document which model Attirelly actually runs, in writing. This determines who recognizes revenue, who owes GST/TCS, and how vendor payouts work — and blocks further invoice/settlement work...	sharique A	10 Aug 2026 07:32 PM
4	Attirelly	Bug	New	P0	[SEC-03] Add proper role-based auth to every mutating route in product.py first (DELETE /, DELETE /redis/clear, POST /, PUT & DELETE /{product_id}, POST /bulk_product_status_change), then do the same authorization audit across every other router — some...	Prabhakar Kumar	10 Aug 2026 07:32 PM
3	Attirelly	Bug	New	P0	[SEC-02] Change to fail CLOSED: reject any webhook if the secret is missing/unset instead of silently accepting it.	Prabhakar Kumar	10 Aug 2026 07:32 PM

#	Project	Tracker	Status	Priority	Subject	Assignee	Updated
2	Attirelly	Bug	New	P0	[SEC-01] Reprice every cart line server-side from the DB/Shopify price before creating the Razorpay order. Reject the request if the client-submitted price doesn't match.	Prabhakar Kumar	10 Aug 2026 07:32 PM
